

United Nations In Economic Development: Need For A New Strategy

55TH COMMISSION for SOCIAL DEVELOPMENT

Strategies for the eradication of poverty to achieve sustainable development for all
1-10 February 2017, United Nations Headquarters, New York

 #CSocD55 #SDGs #GlobalGoals

"RUSSIAN SOLUTIONS FOR THE WORLD: TECHNOLOGIES, METHODS AND WAYS OF SUSTAINABLE DEVELOPMENT MANAGEMENT, THEORY AND PRACTICE"

Organizer: Interregional Public Charitable Organization of Assistance to Persons with Disabilities "Sail of Hope"
Moderator: Larisa ZELENTOVA, President of the Interregional Public Charitable Organization of Assistance to Persons with Disabilities "Sail of Hope"

The problem of poverty both in a particular country and globally is not only the result of economic problems. It is an integral part of the complex fundamental challenges. We are talking about the preservation of the natural environment, preventing the threat of nuclear war, resolving ethnic and religious conflicts, improving the quality of life and development of human creativity, narrowing the gap between rich and poor.

The global community can find appropriate responses to these challenges only by giving up "globalization without social justice" in favor of "globalization with a human face", removing an increasingly important role in the global development to its social and ethical components, based on the principles of cooperation and mutual assistance in the interests of all mankind, relying on the expanded capacity and entrepreneurial activities undertaken by NCOs.

Transition to innovative model of development of society and economy requires close cooperation between government and civil society, interaction with scientists and experts, creating a search space of solutions and their implementation based on the structures and capacities of the United Nations and other international organizations. Participants of "Sail of Hope" Side Event are unanimous in the necessity of consolidation of the healthy forces of our planet to address the acute challenges of the present and planning the future for sustainable development of civilization. This requires the UN to maintain or initiate the following research areas and programs in accordance with their meaning: consistency, morality, self-management, proactivity, transparency, innovation, money, NGO.
